

Smart Kitchen™

User Manual

Complete Feature Reference — Version 7.0

smart-kitchen-opal.vercel.app

About This Manual

This is the complete feature reference for Smart Kitchen™ v7.0. It documents all current features, settings, and operational details as of May 2026. New features added in Phase 1.5 are marked with ★ NEW.

For a quick-start guide, see the Smart Kitchen™ Family Guide. For business and investor information, see the Executive Brief.

App Access

- Live URL: smart-kitchen-opal.vercel.app
- Platform: Progressive Web App (PWA) — works on any browser, on any device
- Mobile: Add to Home Screen on iOS or Android for app-like experience
- Auth: Supabase secure authentication — email and password
- Admin accounts: thesmartkitchenapp@gmail.com and michiganrvvacations@gmail.com

Feature Summary

Feature	Tier	Description
Dinner Plan Generator	All	AI-generated 7-day dinner plan. Busy Night flag for quick 20-min meals. Full-day planning coming Phase 3.
Can I Have This?	All	Scan any product label to verify dietary compliance. Returns Yes, No, or In Moderation with suggested serving size.
Family Profiles	All	Up to 4 members (Family tier). Per-member dietary restrictions enforced in all AI output.
Inventory Manager	All	Pantry/fridge/freezer tracking. Camera photo identification, receipt scanner, and manual entry.
Leftover Scanner	All	Photo-based leftover identification, serving estimate, use-by date, consumption logging.
Weekly Ad Scanner	All	Photo/screenshot upload of grocery ads. Meal plans built around sale items. Retailer integration Phase 3.
Receipt Scanner	All	Photograph receipts to auto-populate inventory. Fold long receipts into 6" sections. Totals inform Smart Money (future).
5-Star Rating System	All	1–5 star rating per meal. 5-star = 4-week rotation cooldown. 1-star = never again.
Recipe Photo System	All	Photos on all card types. Camera pill buttons. Canvas compression, quota safe.

Feature	Tier	Description
Substitute Tool	All	AI ingredient substitution respecting dietary restrictions.
Make This	All	Step-by-step cooking instructions from any recipe card.
Web Browse	All	Search the web for recipe variations from any meal card.
Shopping List	All	Auto-builds from meal plan. Restock queue from inventory. Build from Ads option. Email to shopping partner or Shipt. Print from card.
Google Calendar	All	Add any meal to Google Calendar with one tap.
In-App Support Chat	All	Claude-powered draggable chat bubble. Callback opt-in. Escalates to email support.
Print Meal Plan	All	Clean print-formatted weekly dinner plan.
Senior Mode	All	Enlarged text, simplified layout. Toggle in Settings.
30-Day Free Trial	All	No credit card required. 30-day countdown in Settings.
Wild Harvest Inventory	All	Inventory category for hunters and anglers. 27 species with freezer life intelligence. AI builds meals around harvested protein automatically.
Home Harvest Inventory	All	Inventory category for gardeners and hobby farmers. 40+ produce items, eggs, livestock, preserved goods. Surplus alert and seasonal intelligence built in.
Harvest Label Printing	All	Print Avery label sheets (5160/5163/5164) for Wild and Home Harvest items. Each label: item name, category, harvest date, servings, best-by date, Smart Kitchen trademark.
Adaptive Learning	All	AI learns from every interaction — Made It, Change Meal, star ratings, leftover usage, yield corrections. Builds a household preference profile that improves every meal plan.
Change Meal	All	Swap any day's dinner without regenerating the full week. Rejection logged to Adaptive Learning. Skip the same meal twice and it joins the Never Suggest list automatically.
Rejected Meals View	All	Saved tab shows all banned meals with reason (1-star or skipped). Green Restore button removes any meal from the banned list instantly.
Yield Correction	All	After repackaging Home Harvest items, confirm actual yield. Delta logged and used to improve future estimates over time.
Caregiver Report	Medical+	Remote dietary oversight — coming Phase 2.
Medication-Aware Planning	Medical+	GLP-1, bariatric, cardiologist-directed — coming Phase 2.
Full-Day Meal Planning	Coming	Breakfast, lunch, and dinner — Phase 3.
Retailer Ad Integration	Coming	Auto-pull weekly ads from major retailers — Phase 3.
Smart Money	Coming	Family budget tracking using receipt totals — Phase 3.
Cloud Sync	Coming	Multi-device sync — Phase 3.
SMS Shopping List	Coming	Twilio-based SMS delivery — Phase 2.
Multilingual	Coming	Spanish first — Phase 3.

Account & Subscription

Free Trial

All accounts begin with a 30-day free trial. No credit card is required to start. The trial countdown is visible in the Settings tab. Trial touchpoints appear at days 15, 10, 5, and daily thereafter.

A Day 5 retention conversation is built into the support chat — the AI checks in about your experience and offers help if needed.

Subscription Tiers

- Solo: \$7.99/month or \$49.99/year — 1 device, full AI meal planning, all core features
- Family: \$12.99/month or \$99.99/year — up to 4 family members, 3 devices, per-member dietary profiles
- Medical+: \$19.99/month or \$179.99/year — unlimited devices, medical dietary management, caregiver features (Phase 2)

PROMO CODE: SMG528 — \$5/month off first 12 months. Enter at Stripe checkout.

Settings Tab

- Toggle Senior Mode — larger text, simplified navigation throughout the app
- View trial countdown and subscription status
- Manage family member profiles
- Set shopping list email — yourself, a partner, or a professional shopping service such as Shipt
- Save phone number and callback consent for support chat callback opt-in
- Save phone number for SMS shopping list (Phase 2)
- Connect to Supabase auth account

Can I Have This?

The "Can I Have This?" button appears in the main navigation alongside Family, Scan, Recipes, and Make This. It allows users to scan any product label — at a grocery store, restaurant, or at home — and instantly verify whether it conforms to the active dietary restriction profile.

Response Types

- Yes — the product is compliant with your dietary restrictions
- No — the product contains a restricted ingredient or allergen
- In Moderation — the product is acceptable within limits, with a suggested serving size provided

NOTE: This feature is especially valuable for Medical+ households managing GLP-1, bariatric, diabetic, or cardiologist-directed diets. It works at the store before purchase, not just at home.

Meal Plan

Generating a Meal Plan

1. Navigate to the Meal Plan tab
2. Click "Generate Meal Plan"
3. The AI generates a 7-day dinner plan
4. Family member dietary restrictions are automatically enforced
5. Weekly ad sale items are incorporated if a Weekly Ad Scan has been run
6. 5-star keeper meals are included (max 3 per week, on 4-week cooldown)

CURRENT SCOPE: Smart Kitchen™ currently generates dinner plans. Full-day meal planning (breakfast, lunch, and dinner) is coming in Phase 3 — users will be able to select full-day plans for individual days or the entire week.

DIETARY ENFORCEMENT: All AI-generated recipes and meal plans respect every dietary restriction in your family profiles. This is enforced at the system prompt level — non-compliant suggestions do not occur.

Busy Night Flag

Toggle "Busy Night" on any day of the week before generating your meal plan. The AI generates a quick meal (20 minutes or less) for that evening. Designed for sports nights, after-school activities, and high-schedule days.

Meal Cards

- Tap any meal card to expand the full recipe and step-by-step instructions
- "Web Browse" — searches the web for recipe variations matching that meal; great for discovering new ideas
- "Add to Calendar" button sends the meal to Google Calendar
- "Make This" button opens step-by-step cooking instructions
- "Add Photo" / "Change Photo" — camera pill button on every card
- Star rating (1–5) — tap to rate after eating
- "Substitute" — AI ingredient substitution

Print Meal Plan

Tap "Print" in the Meal Plan tab for a clean, formatted weekly overview suitable for posting on the fridge or sharing with family members.

★ NEW: Leftover Scanner

The Leftover Scanner uses AI vision to identify leftover dishes from a photograph.

How to Use

7. Navigate to the Leftovers tab
8. Tap "Scan Leftover"
9. Photograph the leftover dish (tap to use camera, or upload from gallery)
10. The AI identifies the dish, estimates servings, and sets a use-by date
11. The photo saves to the leftover card and persists across app close/reopen

Marking a Leftover as Used

When you finish a leftover, tap "Mark as Used." The app asks: Dinner, Lunch, or Discard? Your choice is logged to leftover history with a timestamp.

Photo Storage

Leftover photos are compressed to 400px JPEG at 65% quality before storing in localStorage. The photo appears on the leftover card as a persistent thumbnail.

NOTE: If localStorage reaches its quota, the app automatically removes the oldest photo to make room. No data is lost — only the photo thumbnail.

★ NEW: Recipe Photo System

Photos are supported on every card type in the app: Meal Plan cards, Recipes tab, Desserts tab, Saved Recipes, Make This modal, and active recipe/dessert modals.

Adding Photos

12. Tap "Add Photo" or "Change Photo" (camera pill button) on any card
13. Camera opens directly on mobile; file picker on desktop
14. Photo is compressed to 600px JPEG at 70% before saving
15. Photo saves immediately to localStorage and displays as a thumbnail

5-Star Photo Prompt

When you rate a meal 5 stars, the app automatically prompts you to photograph the dish. This captures your best meals with photos for future reference.

Camera Pill Buttons

Camera pill buttons show "Add Photo" when no photo exists and "Change Photo" when one does. In Senior Mode, button text is enlarged to font size 16. Normal mode uses size 12.

★ NEW: 5-Star Meal Rotation

The 5-star rating system controls how meals rotate in and out of your meal plan over time.

- 1 star: Meal is flagged as disliked — never suggested again
- 2–4 stars: Standard rotation — may appear again in future meal plans
- 5 stars: Meal becomes a "Keeper" — added to 4-week rotation cooldown

Each week, a maximum of 3 keeper meals are included in the generated plan. The remaining 4+ meals must be fresh new suggestions. After 28 days, keeper meals cycle back as eligible suggestions.

WHY THIS MATTERS: Without rotation management, AI meal plans tend to repeat popular meals too frequently. The 5-star cooldown system ensures variety while still honoring your favorites.

★ NEW: Weekly Ad Scanner (Batch Upload)

Photograph or screenshot your weekly grocery store ad and upload the images — multiple pages at once. The AI reads sale prices and items, then incorporates them into your meal plan and shopping list.

How to Use

16. Navigate to the Weekly Ad tab

17. Tap "Upload Ad Images"
18. Photograph or screenshot your grocery ad and select multiple images at once
19. The AI scans all pages and extracts sale items
20. Manually select additional items — including non-food items — to add to your shopping list
21. Generate your meal plan — sale items are automatically prioritized

COMING PHASE 3: Direct integration with major retailers will automatically pull weekly ad information for your stores of choice — no photos or screenshots required.

Inventory Manager

Adding Items

- Camera photo — photograph items in your pantry, refrigerator, or freezer; Smart Kitchen™ identifies the items automatically. Place items on the counter with labels visible for best results.
- Receipt scan — photograph a grocery receipt to add purchased items in bulk (see Receipt Scanner section)
- Manual entry — add items individually with name, quantity, and storage location

Editing Before Saving

After the app identifies items from a photo, you have the opportunity to review and edit each item's description, quantity, and storage location before saving to inventory.

Restock Button

Each inventory item has a Restock button. Tap it to queue that item for your next shopping trip at any time — not just when generating a meal plan. Useful for planning ahead on household staples.

- Three sections: Pantry, Fridge, and Freezer
- Inventory is used by the meal plan generator to avoid suggesting meals requiring out-of-stock items
- Shopping list generation accounts for what is already in inventory

Shopping List

How the Shopping List Builds

- Auto-generated from your active meal plan — items already in inventory are excluded
- Restock queue — tap Restock on any inventory item at any time to queue it; the Shopping List shows a Restock button with the queued count; tap to move all queued items into the active list
- "Build from Ads" button at the top — loads items manually selected during your Weekly Ad scan, including non-food items

Delivering Your Shopping List

- Email — tap "Email Shopping List" to send to your designated shopping email (set in Settings); can be yourself, a partner, or a service like Shipt
- Print — tap "Print" directly from the Shopping List card for a physical copy
- SMS — coming Phase 2 via Twilio; save your phone number in Settings

NOTE: The shopping list email address is set in Settings and can be updated at any time. It does not have to match your account email.

Receipt Scanner

Photograph your grocery receipt to automatically add purchased items to your inventory.

Best Practices

- Ensure the receipt is flat and well-lit with item names clearly readable
- For long receipts, fold into 6-inch sections and upload each section individually for best results
- The receipt header (store name, date) and totals section are not required but are recommended — they help Smart Kitchen™ learn from your shopping patterns

SMART MONEY: Receipt totals are used by the upcoming Smart Money module to assist with family budgeting. Including the totals section in your scans builds this data over time.

In-App Support Chat

A Claude-powered support chat is available to all subscribers. The chat bubble appears at the bottom-right of the screen by default.

★ NEW: Draggable Bubble

The chat bubble is freely draggable anywhere on screen using touch or mouse. A 4px movement threshold distinguishes a tap (open chat) from a drag (reposition). Position is saved to localStorage at key sk_chatBubblePos and persists across sessions.

Callback Opt-In

During the setup process, users can opt in to phone callback support by entering their phone number and providing consent. Once opted in, users can request a callback directly through the support chat. A Smart Kitchen team member will reach out by phone. Response time is within 1 business day.

What the Chat Knows

The system prompt loaded into the support chat includes your full user profile and dietary restriction data. The chat is context-aware — it knows your plan, your family, and your restrictions.

Escalation

If the chat cannot resolve your issue, it escalates to a human at thesmartkitchenapp@gmail.com. Escalation triggers include: bugs, scanner failures, dietary compliance concerns, feature requests, frustrated users, and seniors struggling with the app.

Desserts Tab

Browse and generate AI dessert suggestions. All desserts respect your active dietary restrictions. Recipe cards, photos, star ratings, Make This, Web Browse, and Substitute all work identically to the Meal Plan tab.

Recipes Tab

Browse all previously generated recipes. Save favorites. Rate, photograph, and re-use recipes across meal plans. The Recipes tab acts as your growing personal cookbook.

Senior Mode

Toggle Senior Mode via the  Senior button in the menu bar, or in Settings. When enabled:

- All text is enlarged throughout the app
- Navigation is simplified
- Camera pill buttons use larger font size (16 vs 12)
- Support chat proactively greets seniors after new feature releases (Phase 2)

Data & Privacy

- All user data is stored in localStorage on your device — no cloud sync in Phase 1
- Auth is handled by Supabase — your password is never stored by Smart Kitchen
- Receipt photos and leftover photos are compressed and stored locally
- Cloud sync across multiple devices is coming in Phase 3
- No user data is sold or shared with third parties

Troubleshooting

Meal plan not generating

- Check your internet connection — AI generation requires connectivity
- Ensure at least one family profile is set up
- Try clearing the browser cache and reloading

Receipt scanner not reading items

- Ensure good lighting and the receipt is fully in frame
- For long receipts, fold into 6-inch sections and upload each section individually
- Try uploading a photo from your gallery instead of using the live camera
- Tap the support chat bubble and report the issue — it will escalate automatically

Inventory photo not identifying items correctly

- Place items on the counter with labels clearly facing the camera
- Ensure good lighting and avoid glare on packaging
- Review and edit item descriptions, quantities, and storage locations before saving

Photo not saving

- localStorage may be at capacity — the app will automatically remove the oldest photo
- Try refreshing the app after a photo save attempt

Support chat not responding

- Check your internet connection
- Refresh the app and try again
- Email thesmartkitchenapp@gmail.com directly

Version History

★ NEW: Wild Harvest Inventory

Wild Harvest is the inventory category built for hunters and anglers. It supports 27 species with freezer life intelligence. When Wild Harvest items are in inventory, the AI automatically includes species-appropriate recipes in the next meal plan, prioritizing items before their freezer life expires.

Adding a Wild Harvest Item

- Go to Inventory and tap + Add
- Enter the item name (e.g., Ground Venison, Salmon Fillets, Bluegill Cleaned)
- Select Wild Harvest as the category
- Set location: Freezer for long-term storage, Fridge for this week's use
- Enter quantity and unit (2 lbs, 4 fillets, 6 fish)
- Tap Add — the item appears in inventory and the next meal plan will include a wild harvest meal

Printing Freezer Labels

When Wild Harvest or Home Harvest items exist in inventory, a green Print Labels button appears in the Inventory filter bar. Select your Avery format: 5160 (30/sheet), 5163 (10/sheet), or 5164 (6/sheet). Mixed label formats can appear on one sheet. Each label includes: item name, category, harvest date, servings, best-by date, and Smart Kitchen™ trademark. Tap Print Labels to open a print-ready sheet in a new window.

★ NEW: Home Harvest Inventory

Home Harvest is the inventory category built for gardeners and hobby farmers. It supports 40+ produce items, eggs, livestock cuts, and canned, frozen, or dehydrated preserved goods — each with shelf or freezer life tracking. A surplus alert fires when produce is approaching expiry. The AI features fresh Home Harvest items prominently in meal plans and integrates with Medical+ dietary restrictions automatically.

- Add items under the Home Harvest category in Inventory
- Set harvest date, quantity, and storage location
- Print Avery labels the same way as Wild Harvest items
- Use Yield Correction after repackaging to log the actual bag/container count and improve future estimates

★ NEW: Adaptive Learning

Every interaction with Smart Kitchen™ is a signal. Over time the AI accumulates a preference and behavior profile unique to your household and uses it to generate better meal plans automatically.

- Made It tap — logs the meal, protein, day, and context. Do it 2+ times and it becomes a household favorite surfaced regularly in future plans
- 5-star rating — meal added to HOUSEHOLD FAVORITES and HIGHLY RATED lists; reappears regularly in future plans
- 1-star rating — meal added to NEVER SUGGEST list permanently; appears in Rejected Meals view with Restore option
- Change Meal tap — rejection logged alongside 1-star bans; skip the same meal twice and it stops being offered
- Leftover Used (Dinner) — confirms leftover was consumed; validates portion recommendation was correct
- Leftover Used (Lunch) — separate signal; teaches the app this dish works well as next-day lunch
- Leftover Removed — logged as wasted; adjusts portion recommendations downward for this dish over time
- Wild/Home Harvest item added — AI schedules species-aware or produce-forward meal before freezer/shelf life expires

★ NEW: Change Meal & Rejected Meals View

The Change Meal button appears on every meal plan card. Tap it to swap that day's dinner without regenerating the full week. The rejected meal is logged to Adaptive Learning. Skip the same meal twice and it automatically joins the Never Suggest list.

The Rejected Meals view in the Saved tab shows every banned meal with the reason for the ban (1-star rating or skipped X times). A green Restore button removes it from the banned list instantly — no accidental permanent bans.

To restore a rejected meal:

- Go to the Saved tab
- Scroll to the Rejected Meals section
- Tap the green Restore button next to the meal you want to un-ban

- v1.5 — April–May 2026: Stripe subscriptions, free trial, in-app support chat, Google Calendar, Make This, Web Browse, Substitute Tool, Weekly Ad Scanner, Busy Night flag, print formatting, shopping list email.
- v6.0 — May 2026: Leftover Scanner with photos, Recipe photo system on all card types, 5-star meal rotation, draggable chat bubble, camera pill buttons, 5-star photo prompt, consumption tracking (Dinner/Lunch/Discard), batch Weekly Ad upload, callback opt-in support, shopping partner email in Settings, Restock queue system, Build from Ads shopping list. Trademark filed (99841391). LLC registered (28578874).

v7.0 — May 2026: Wild Harvest inventory (27 species, freezer life intelligence), Home Harvest inventory (40+ produce, eggs, livestock, preserved goods), Harvest Label Printing (Avery 5160/5163/5164), Adaptive Learning Layer 1 (Made It + Change Meal + Star Rating loop), Rejected Meals view with Restore, Yield Correction logging, Change Meal with automatic Never Suggest escalation, 30-day free trial, Senior Mode via menu bar button. Full consistency with Family Guide v9 and Executive Brief v15.
