1. Getting Started — Account & Access

Smart Kitchen runs entirely in your web browser — no app download required. It works on any smartphone, tablet, or computer.

Welcome Screen

[SCREENSHOT 1B]

Welcome screen scrolled — Inventory, Meal Planning, Recipes, Sale Shopping features and 'Let's Get Started' gold button

- Tap “Let’s Get Started →” to begin the 2-minute setup wizard
- Or tap “Sign In” in the top right if you already have an account

The Setup Wizard

Every new account goes through a short guided setup. It takes about 2 minutes and sets up your family profile, proteins, and pantry so the AI can build your first meal plan immediately.

Step 0 — Setup Overview

A quick overview shows the 3 setup steps. Tap “Let's Begin →” to start.

Step 1 — Family Profile

[SCREENSHOT 1D]

Family Profile wizard step — household size selector (1–8), member name field ('Mom'), and dietary needs chips (No Restrictions, Standard Adult, Teen Athlete, Senior Adult, Diabetic Strict, Renal/Kidney, Diabetic+Renal, Heart-Healthy, Low Sodium)

1. Choose your household size by tapping a number (1–8)
2. Enter the first person's name
3. Select their dietary needs — tap all that apply
4. Scroll down to add more household members
5. Tap “Next →” when all members are added

💡 Medical+ subscribers see 20+ additional dietary conditions here including GLP-1, Bariatric, Keto, Mediterranean, MIND Diet, and more. See Section 13.

Step 2 — Recipe Search Preference

Choose which website opens when you tap a meal name to get the full recipe. You can change this anytime in Settings. Tap “Next →” to continue.

Step 3 — Add Your Proteins

[SCREENSHOT 1F]

Add Your Proteins — protein name field, quantity field (defaulting to 6 portions), + Add Protein button, Back / Skip / Next buttons

6. Type a protein name (e.g. Chicken Breast, Ground Beef, Pork Chops)
7. Enter the quantity in portions
8. Tap “+ Add Protein” to add it to your list
9. Repeat for each protein in your freezer
10. Tap “Skip” to add proteins later, or “Next →” when done

Step 4 — Inventory Setup Choice

[SCREENSHOT 1G]

Inventory Setup — three options: Start with common pantry items (selected, pre-checks ~30 staples), Start from scratch, Skip for now

- “Start with common pantry items” — recommended. Pre-checks ~30 staples. Uncheck what you don’t have.
- “Start from scratch” — manually check off items you have
- “Skip for now” — go straight to the app and add inventory anytime

Step 5 — Pantry Checklist

[SCREENSHOT 1H]

Pantry Checklist — 30 common staples pre-checked (Olive Oil, Vegetable Oil, All-Purpose Flour, Granulated Sugar, Salt, Black Pepper, Garlic Powder, Onion Powder...) with category labels and 'Finish Setup (25 items)' gold button

11. Scroll through the pre-checked list of ~30 common pantry staples
12. Uncheck anything you don't have
13. The button updates to show how many items will be added
14. Tap “🔑 Finish Setup (X items)” to complete setup and enter the app

Setup Complete — Ready to Cook

The app loads with your pantry inventory already counted. The header shows your item totals. Tap “📅 Build Meal Plan” to generate your first 7-day dinner plan in about 15 seconds.

💡 You can always update your family profile, add more proteins, or adjust inventory later. Nothing from setup is locked — the app is designed to grow with you.

Signing In on Return Visits

- Tap “Sign In” and enter your email and password
- Your data loads automatically from the cloud — everything is exactly as you left it
- Smart Kitchen works on any device — sign in from your phone, tablet, or computer

Data & Cloud Sync

- All your data — inventory, meal plans, family profiles, recipes — saves to the cloud automatically
- Sign in on any device and your data is there
- No manual backup is needed

2. The App at a Glance

Once signed in you land on the main app screen. Here is a quick map of everything you can see and do.

Menu Bar (Top Row)

Button	What It Does
Family	Open family profiles and household settings
Aa Off / Aa On	Toggle Senior Mode — larger text, bigger buttons
Prep Veg	Log prepped vegetables ready to use
Repackage	Divide bulk proteins into individual portions
Scan	Open the scanner — receipt, shelf, weekly ad, whiteboard, or leftovers
Recipes	Generate AI recipe suggestions from your inventory
Make This	Get a single instant recipe idea right now
Family Recipes	View, add, and share your household's own recipes

 Can I Have This?	Scan a product label to check dietary compatibility
 Scale	Connect your Bluetooth nutrition scale
 Plan Occasion	Generate a meal plan for a special event
 Hey Cathy	Open the voice assistant

Tabs (Main Navigation)

Tab	What You Find There
INVENTORY	All your food items — proteins, produce, pantry, freezer, harvest
RECIPES	AI recipe suggestions, Explore, Swap, Add to Plan
SAVED	Your starred keeper meals
MEAL PLAN	Your 7-day dinner plan with day-by-day cards
SHOPPING	Auto-generated shopping list from your meal plan
DESSERTS	AI dessert suggestions from your baking inventory
LEFTOVERS	Log and track leftover meals
SUBSTITUTE	AI ingredient substitution — swap what you have

 You can pin Smart Kitchen to your phone’s home screen for one-tap access. In Chrome on Android or iOS, tap the three-dot menu and choose “Add to Home Screen.”

3. Inventory Management

The inventory is the foundation of Smart Kitchen. The AI builds your meal plans around what you actually have — reducing waste and avoiding “I don’t have that” moments.

Adding Items Manually

15. Tap the “Inventory” tab
16. Tap the “+ Add Item” button
17. Enter the item name, quantity, and unit (portions, lbs, bags, etc.)
18. Choose a category: Proteins, Produce, Pantry, Dairy, Freezer, Wild Harvest, or Home Harvest
19. Tap Save

[SCREENSHOT 8]

The screenshot shows the 'Add Item' form in the Smart Kitchen app. At the top, there's a header with 'Beef Burgers' and 'portions' in green. Below this is a search bar and a 'Sort Category' dropdown. A navigation bar shows 'All', 'Pantry', 'Fridge', 'Freezer', and 'All' with a dropdown arrow. A 'Cancel' button is on the left. The main form has fields for 'Name', 'Qty', and 'Unit', with an 'Add' button. Below these are category filters: Protein, Produce, Dairy, Frozen, and 'Pantry' (highlighted). Further down are sub-categories: Baking, Grains, Condiments, Other, Wild Harvest, and Home Harvest. A 'Location' dropdown shows 'Freezer', 'Fridge', and 'Pantry' (highlighted). The bottom section displays six category cards: 'All-Purpose Flour', 'Arm & Hammer Baking Soda', 'Baking Chips', 'Baking Soda', 'Cherry Pie Filling', and 'Crisco All-Vegetable Shortening'. Each card has a 'Pantry' label and a 'Restock' button. A 'Log' button is in the bottom right corner.

Add Item form — name, quantity, unit, and category fields

Repackaging Proteins

If you buy proteins in bulk and divide them into individual portions, Repackage keeps your count accurate.

- Tap “Repackage” in the menu bar
- Select the protein (e.g. Ground Beef 5 lbs)
- Enter the number of portions and the portion size in oz
- Tap Repackage — the bulk item is replaced with individual portion counts

Prep Veg

Log chopped or prepped vegetables separately from raw whole produce so the AI knows they are ready to use immediately.

- Tap “Prep Veg” in the menu bar
- Select the vegetable and how much you prepped
- Tap Save — the prepped item appears in your inventory

Inventory Review Reminders

A Sunday Inventory Check reminder encourages you to update quantities weekly. Tap “Review Now” to go directly to your inventory, or “Dismiss” to close it.

💡 Keep your inventory accurate and the AI keeps your meal plans accurate. A quick 2-minute Sunday review makes the whole week run smoother.

4. Scanning — Receipt, Shelf, Weekly Ad, Whiteboard & Leftovers

Smart Kitchen has five scan modes — all accessed from the Scan button in the menu bar. Each mode uses AI vision to read and process a different type of content.

Receipt Scanner

Automatically adds purchased grocery items to your inventory from a photo of your receipt.

20. Tap “Scan” in the menu bar
21. Make sure the “Receipt” tab is selected
22. Tap “Take Photo” or upload a receipt image
23. The AI reads the receipt and identifies all food items
24. Review the suggested items and tap “Add to Inventory”

[SCREENSHOT 10]

Receipt scanner result — showing identified items from a grocery receipt ready to add to inventory

💡 Receipt scanning works best in good lighting with the receipt flat and fully visible in the frame.

Shelf Scanner

Scan a pantry shelf, refrigerator, or freezer to identify and add multiple items at once.

- Tap “Scan” → “Shelf” tab
- Point your camera at the shelf and tap “Take Photo”
- Review the identified items and confirm

Weekly Ad Scanner

Scan your grocery store’s weekly sale flyer to inform your meal plan. The AI identifies sale items and incorporates them into your next meal plan suggestion.

- Tap “Scan” → “Weekly Ad” tab
- Upload one or more photos of the weekly ad

- The AI extracts sale items and stores them for your next meal plan
- Sale items appear with a “Sale” badge when used in your plan

Whiteboard / List Scanner

Photograph any handwritten list — a whiteboard, sticky note, or paper — and the AI reads your handwriting and adds items to your inventory or shopping list.

- Tap “Scan” → “List” tab
- Take a photo of any handwritten list
- The AI reads your handwriting and extracts the items
- Review and confirm which items to add

Leftover Scanner

Photo-identify a leftover dish, set a use-by date, and track it so nothing gets forgotten in the back of the fridge.

- Tap “Scan” → “Leftover” tab (or tap the LEFTOVERS tab directly)

- Take a photo of the leftover dish
- The AI identifies the dish and estimates servings
- Set a use-by date and tap Save
- The leftover appears in your Leftovers tab with a countdown

💡 The Leftover Scanner is also accessible directly from the LEFTOVERS tab at the bottom of the navigation.

5. Family Profiles & Dietary Settings

Family profiles tell Smart Kitchen who you are cooking for. Every meal plan, recipe suggestion, and shopping list is built around these profiles.

Setting Up Profiles

[SCREENSHOT 13]

Save & Close

Log

Family profiles screen — showing household size number selector (increase to add members), member list with Edit and Remove buttons, and Temporary Medical Diets section

25. Tap “Family” in the menu bar
26. Set your household size
27. Increase the household size number to add a new member slot — a new row appears automatically
28. Enter their name, date of birth, and member type: Adult, Teen Athlete, Child, or Senior
29. Select a dietary restriction if applicable
30. Tap Save

[SCREENSHOT 14]

Add or edit member form — name, date of birth, member type selector (Adult, Teen Athlete, Child, Senior), and dietary restriction chips. Note: account roles (Owner, Viewer, Manager) are assigned by invitation only through Household Members settings.

Dietary Restrictions

Restriction	What the AI Does
No Restrictions	Standard meal variety with no limitations
Standard Adult	Balanced meals for a typical adult household
Teen Athlete	Higher protein and calorie density for active teens
Senior Adult	Softer textures, easier prep, gentler on digestion
Diabetic (Strict)	Low glycemic, no added sugar, whole grains only
Heart-Healthy	Low saturated fat, sodium-conscious, omega-3 rich
Renal / Kidney	Restricts potassium, phosphorus, and sodium
Low Sodium	Under 1500mg sodium per meal target

💡 Medical+ subscribers unlock 20+ additional dietary conditions including GLP-1, Bariatric, Keto, Mediterranean, MIND Diet, Gout, GERD, and more. See Section 13.

💡 Once you save a family member with a dietary restriction, the “Can I Have This?” button will automatically appear in your menu bar. This tool lets you scan any packaged food label at the store to instantly check if it is safe for that member. See Section 12.

Guided Plate Mode

Guided Plate Mode enables the “Build Plate” button on meal plan cards, activating step-by-step plating with live nutrition tracking via Bluetooth scale.

- Tap a member’s profile
- Find the blue “GUIDED PLATE MODE” box
- Tap to toggle ON

Allergy Enforcement Levels

When allergies are set in a Medical+ profile, you choose how strictly the AI enforces them:

- Strict — never suggests meals containing the allergen
- Warn — shows a warning badge but still suggests the meal
- Inform — notes the allergen but takes no action

6. 7-Day Meal Planning

The 7-day meal plan is the heart of Smart Kitchen. One tap generates a full week of dinners built around your inventory, family profiles, dietary needs, and your household's past preferences.

Generating Your Meal Plan

31. Tap the “Meal Plan” tab
32. Tap “Regenerate” (or “Build Meal Plan” on first use) (or “Build Meal Plan” on first use)
33. Wait about 15 seconds while the AI generates your plan
34. Your 7-day plan appears with a meal for each night of the week

The Meal Plan Day Card

Each day has a card showing the recipe, ingredients, and action buttons.

[SCREENSHOT 17]

Meal plan day card — expanded card showing meal name, star rating, ingredients list, Ready status, Made It!, Build Plate, and Photo on row 1 — Change Meal, Occasion, and Pair a Drink on row 2 — Add to Calendar on row 3

Managing Your Plan

Action	How To
See the full recipe	Tap anywhere on the meal name to expand ingredients and steps. Tap the  web link next to “TAP FOR FULL RECIPE” to search the web for variations, substitutions, and cooking tips for that meal
Mark as made	Tap ☒ Made It! after cooking — updates your history and inventory
Rate a meal	Tap the stars (1–5) — 5 stars saves as a keeper, 1 star bans it forever
Change one meal	Tap “Change Meal” for a new AI suggestion just for that day
Mark busy night	Tap “⚡ Busy?” — AI swaps to a quick under-20-minute meal
Build a plate	Tap “🍴 Build Plate” (Medical+ with Guided Plate Mode on)
Pair a drink	Tap “🍷 Pair a Drink” for an AI wine or beverage pairing

Add to calendar

Tap “Calendar” to push the full week to Google Calendar

Dismissed Meals

Meals skipped or changed twice appear in a “REJECTED MEALS” section at the top of the Meal Plan tab.

- Tap “Restore” next to any meal to bring it back into rotation
- Tap “X Dismiss All” to permanently clear the entire rejected list

Add to Plan from Recipes Tab

You can add any recipe from the Recipes tab directly to a specific day in your meal plan without regenerating the whole week.

- Go to the Recipes tab and find a recipe you want
- Tap the green “ Add to Plan” button on the recipe card
- A day picker shows Monday through Sunday — each day shows the current meal on the right
- Tap the day you want, then tap “Add to Plan”
- If that day already has a meal, a confirmation asks if you want to replace it
- The app takes you directly to the Meal Plan tab to see the result

7. Recipes — Suggestions, Explore & Add to Plan

The Recipes tab is your on-demand recipe browsing experience — generate suggestions from your inventory, explore by cuisine or ingredient, and add anything you find directly to your meal plan.

Recipe Suggestions

- Tap the “Recipes” tab to see four AI-generated recipe cards built from your inventory
- Each card shows cook time, serving size, ingredients on hand, and items you’d need to buy
- Tap “Tap for Full Recipe →” to expand the complete recipe with step-by-step instructions
- Tap “📅 Add to Plan” to add the recipe to any day in your 7-day meal plan
- Tap “❖ Swap Recipe” to get a different suggestion for that card
- Tap “🔄 Refresh” in the top bar to regenerate all four cards

Explore Recipes

Explore lets you search for recipe ideas by any theme, cuisine, ingredient, or mood — with full dietary enforcement.

[SCREENSHOT 19]

Explore modal — text input field, Use What I Have vs Open Exploration mode cards, and blue Explore button

35. Tap the blue “🌀 Explore” button in the top bar of the Recipes tab
36. Type anything in the search box — a cuisine (“Italian”), an ingredient (“salmon”), a vibe (“comfort food”), or a dish name (“stir fry”)
37. Choose your mode:
 - Use What I Have — builds recipes around your current pantry and freezer
 - Open Exploration — any ingredients welcome, pure inspiration
38. Tap “🌀 Explore” — four recipe cards appear replacing your current suggestions

The heading changes to show your query. Tap “Clear → My Recipes” to return to your standard inventory-based suggestions. All dietary restrictions and Medical+ rules apply in both modes.

Rating & Saving Recipes

- Tap the stars on any recipe card to rate it
- 5 stars — saves as a Keeper. The AI returns to it on a 4-week rotation
- 1 star — bans it from all future suggestions
- 3+ stars — visible in your Saved tab

💡 The Recipes tab is a great way to browse and plan ahead. Use Explore to find inspiration, then Add to Plan to slot it into the right night.

8. Make This, Family Recipes & Saved Meals

Make This

Make This generates a single instant recipe based on what you have right now — no browsing required.

- Tap “🍳 Make This” in the menu bar
- The AI picks the best dinner from your current inventory
- The full recipe appears immediately with ingredients and instructions

Family Recipes

Save your household’s own recipes so the AI can suggest them in your meal plan and you can share them with others.

39. Tap “📖 Family Recipes” in the menu bar
40. Tap “+ Add Recipe”
41. Enter the recipe name, ingredients, and instructions
42. Optionally add a photo
43. Tap Save

[SCREENSHOT 21]

Family Recipes screen — list of saved household recipes with Add Recipe button and Share option

Sharing a Recipe

Every Family Recipe can be shared with anyone using a 6-character code — they import it directly into their own Smart Kitchen.

- Expand any family recipe and tap the “Share” button
- A 6-character share code is generated
- Send the code to anyone — they enter it in their Smart Kitchen to import your recipe
- Shared recipe codes expire after 90 days

Saved Meals

The Saved tab shows all your 5-star keeper meals in one place.

- Tap the “Saved” tab to see your keeper shelf
- Filter by All, Keepers (★★★★★), or Good (★★★★+)
- The AI rotates keeper meals back into your plan on a 4-week cooldown
- Remove any meal from the keeper shelf by tapping the rating again

9. Desserts

The Desserts tab generates AI dessert suggestions based on your baking inventory — flour, sugar, butter, eggs, chocolate chips, and anything else you keep on hand.

- Tap the “Desserts” tab to see AI-generated dessert ideas
- Cards show the dessert name, description, difficulty, and what you already have
- Tap “Swap” to get a different suggestion for that slot
- Tap “🔄 Refresh” to regenerate all dessert suggestions
- Tap “📅 Add to Plan” to assign a dessert to a specific day

💡 The AI builds desserts around your baking inventory. Add baking staples to your inventory under the Pantry category and the dessert suggestions will improve immediately.

10. Substitute Tool

The Substitute tab lets you find AI-powered ingredient substitutions when you are missing something a recipe calls for.

[SCREENSHOT 23]

Substitute tool — ingredient input field, inventory-aware result showing what you have that can substitute

44. Tap the “Substitute” tab
45. Type the ingredient you need to substitute (e.g. “buttermilk”)
46. Tap “Find Substitute”
47. The AI suggests the best substitute from your inventory first, then general alternatives

💡 The Substitute tool is inventory-aware — it checks what you already have before suggesting you buy something new.

11. Shopping List

Smart Kitchen automatically builds your shopping list from the ingredients your meal plan needs that are not in your inventory.

Viewing Your List

- Tap the “Shopping” tab to see your current list
- Items are grouped by category (Proteins, Produce, Dairy, Pantry, etc.)
- Check items off as you shop — checked items move to the bottom

Sending Your List

Method	How To
Email	Tap “Email to Me” — formatted list arrives in your inbox. Requires shopping partner email set up in Settings first.
SMS / Text	Tap “Text to [phone]” — opens your Messages app with the list pre-filled. Requires phone number set up in Settings first.

Print

Tap “Print” to print a formatted list from any printer

Restock Queue

- Tap “+ Add to Restock” on any inventory item that is running low
- Restock items are automatically added to your next shopping list

12. Can I Have This?

Scan any packaged food label, restaurant menu item, or ingredient to instantly check whether it is safe for a Medical+ household member's dietary conditions and medications.

48. Tap “ ? Can I Have This?” in the menu bar
49. Point your camera at the product's nutrition label or ingredient list
50. Select which household member you are checking for
51. Tap Check — the AI returns one of three verdicts:
 - Yes — safe for this member's profile
 - No — contains a restricted ingredient or allergen
 - In Moderation — acceptable in limited amounts with a suggested serving size

[SCREENSHOT 26]

Can I Have This? result — showing the verdict (Yes/No/In Moderation) with a brief explanation for the selected member

💡 Can I Have This? works at the store before purchase, not just at home — especially valuable for households managing GLP-1, bariatric, diabetic, or cardiologist-directed diets.

13. Medical+ Intelligence Engines

Medical+ is a \$10/month household add-on that activates three AI intelligence engines covering 20+ dietary conditions. One flat rate covers all household members.

Activating Medical+

52. Tap “Family” and open a member’s profile
53. Find the red “MEDICAL+ PROFILE” section
54. Tap “Add \$10/mo” to activate
55. Medical+ applies to your entire household — all members benefit

[SCREENSHOT 27]

MEDICAL+ PROFILE

DIETARY PLAN

Diabetic-Friendly | Pre-Diabetic | GLP-1 / Weight Loss

Renal | Cardiac | High Cholesterol | Bariatric

Low Sodium | Low FODMAP | Mediterranean | MIND Diet

Keto | Carnivore | High-Protein | Anti-Inflammatory

Gout | GERD / Acid Reflux | Osteoporosis | Gluten-Free

Custom

DAILY PROTEIN TARGET (g) | GOAL WEIGHT (lbs, optional)

e.g. 75 (auto if blank) | e.g. 165

WEIGHT (optional) | ACTIVITY LEVEL

e.g. 5ft 8in | Light | Moderate | Active

WW DAILY POINTS BUDGET (optional)

e.g. | Enter your WW-assigned daily budget. Smart Kitchen estimates compatible Points from weighed food.

ALLERGIES

Peanuts | Tree Nuts | Shellfish | Fish | Dairy | Eggs

Soy | Wheat/Gluten | Sesame

Additional allergies (e.g. mango, latex)...

SUPPLEMENTS

+ Add Supplement

AI ENFORCEMENT LEVEL

Strict | Barn | Inform

Never suggest conflicting meals | Flag with badge on recipe | Educational notes only

LOG

Medical+ profile section — red Medical+ Profile header, Add \$10/mo button, and dietary plan selector

Dietary Plans (20+ Conditions)

Condition	Primary AI Action
GLP-1 / Weight Loss	Protein-first 25-30g per meal, smaller portions, avoids fried/greasy/sugary
Diabetic-Friendly	Low glycemic, whole grains only, no added sugar, fiber-rich
Pre-Diabetic	Same as Diabetic-Friendly with softer enforcement

Bariatric	Phase-aware: Liquid, Pureed, Soft, or Solid — set your current phase
Cardiac / Heart-Healthy	Low saturated fat, sodium-aware, omega-3 prioritized
Renal Diet	Restricts potassium, phosphorus, and sodium
High Cholesterol	Limits saturated fat, prioritizes fish, oats, legumes
Keto	Net carb targeting, high-fat sources prioritized
Mediterranean	Olive oil, fish, whole grains, legumes, vegetables emphasized
MIND Diet	Leafy greens, berries, nuts, whole grains, fish for brain health
Gout	Avoids purine-rich foods: organ meats, shellfish, red meat
GERD / Acid Reflux	Avoids acidic, spicy, fried foods; smaller gentler meals
High-Protein	30g+ protein per meal, lean meats and legumes prioritized
Anti-Inflammatory	Fatty fish, turmeric, ginger, berries, leafy greens emphasized

Medication-Food Interaction Flags

Medication	Flag
Warfarin / blood thinners	Warns on sudden high Vitamin K meals — advises consistency
Statins (Lipitor, Crestor)	Flags any grapefruit in recipes
Metformin	Adds B12-rich foods to compensate for depletion
Levothyroxine	Flags excess cruciferous vegetables
ACE Inhibitors	Flags potassium-dense foods: bananas, potatoes, oranges

💡 For guidance only. Always follow your healthcare provider's specific dietary recommendations.

💡 Activating Medical+ also unlocks the “Can I Have This?” button in your menu bar. Use it to scan any packaged food label at the store and get an instant verdict — Yes, No, or In Moderation — based on the member's active dietary plan and medications. See Section 12.

14. Smart Plate Mode

Smart Plate Mode guides you through building a complete meal plate component by component using the Bluetooth scale. Available to Medical+ subscribers with Guided Plate Mode enabled.

Starting a Plate Session

- On the Meal Plan tab, tap the green “🍴 Build Plate” button on any meal card
- If two or more family members qualify, a member selector appears — choose who the plate is for
- The scale modal opens

The Plating Flow

Step	What To Do
1. Zero	Place your empty plate on the scale. Tap 🍴 Tare / Zero Scale at the top.
2. Select	Suggested components appear from the recipe. Tap the first component chip.

3. Add food	Place the food on the plate. Tap ✓ Log Component when the weight is stable.
4. Auto-tare	The scale zeros automatically after each log. Add the next food without removing the previous.
5. Repeat	Tap the next component chip, add food, tap Log Component. Repeat.
6. Summary	Tap “Done — See Plate Summary” for a full macro breakdown.
7. Save	Tap “ ☒ Save & Close.” Dashboard updates immediately.

[SCREENSHOT 30]

Plate summary screen — each component with weight and macros, plate total, AI coaching note, and Save & Close button

15. Nutrition Dashboard

The Nutrition Dashboard appears at the top of the Meal Plan tab for Medical+ subscribers. It tracks today's logged intake against each member's personal targets.

Daily View

- Protein — vs. your daily target
- Calories, Carbs, Sat. Fat, Fiber — all tracked against personal targets
- WW Points — vs. your daily budget (if set in profile)

Bar colors: Green = on track • Amber = approaching limit • Red = over limit

Member Filter

- Tap any member badge to filter all bars to that person's data
- Targets update to the selected member's profile
- Tap the badge again to clear the filter and see combined household data

7-Day Trend & Narrative

- Tap "7-Day Trend" to expand the bar chart
- Green bars = protein target met • Amber = below target

- A weekly AI narrative summarizes your intake in plain language

Email Report

56. Tap “✉ Email Report”
57. Confirm or edit the destination email address
58. Tap “Send Report →”
59. A branded HTML report arrives with daily breakdown, 7-day averages, narrative, and disclaimer

[SCREENSHOT 33]

Email Report confirmation modal — gold-bordered modal with editable email field, Cancel and Send Report buttons

💡 Reports are for personal tracking only. Always consult your healthcare provider for clinical dietary guidance.

16. Food Journal

The Food Journal lets Medical+ members log any food or drink at any time of day. Tap the green  LOG button in the bottom-right corner from any screen.

Logging an Entry

Field	Instructions
Logging For	Tap the member this entry is for. Condition and bariatric phase shown.
Meal Type	Breakfast, Morning Snack, Lunch, Afternoon Snack, Dinner, Evening Snack, Water/Hydration, Protein Shake, or Other
Date & Time	Defaults to now. Edit to back-fill past entries.
What Did You Eat?	Type the food name. Recent items appear as quick-tap chips.
Amount + Unit	Enter quantity. Choose oz, g, ml, fl oz, lbs, or cups.
Estimate Nutrition	Tap to get protein, calories, carbs, sat fat, sugar, and fiber from the AI.
Bariatric Check	Green ✓ or red ⚠ shows whether the portion fits your phase limit.

Log This Entry

Saves the entry. Dashboard updates immediately.

Medium-large banana, excellent source of potassium and vitamin B6

Log This Entry

For guidance only. Consult your healthcare provider for specific dietary recommendations.

Food Journal nutrition estimate — showing a food item with estimated protein, calories, carbs, sat fat, sugar, and fiber tiles, and the green Log This Entry button

17. Bluetooth Scale

Smart Kitchen integrates with the Etekcity ENS-L221S-SUS Luminary Smart Nutrition Scale via Bluetooth, enabling Smart Plate Mode and live nutrition calculations.

Compatible Scale	
Model	Etekcity ENS-L221S-SUS (Luminary Smart Nutrition Scale)
Browser Requirement	Google Chrome on Android or desktop only

Connecting the Scale

- 60. Wake the scale by placing an item on it or pressing the power button
- 61. Tap the “⚖️ Scale” button in the menu bar
- 62. Tap “Connect Scale” in the modal
- 63. Select your Etekcity scale from the Bluetooth device list
- 64. The modal shows “CONNECTED • LIVE READING”

Scale modal — CONNECTED • LIVE READING with large live weight display, oz/grams conversion, food name field, Estimate Nutrition button, and Tare/Disconnect buttons

Quick Weigh (Standard Mode)

- Connect the scale
- Place your food on the scale
- Type the food name in the “What are you weighing?” field
- Tap “Estimate Nutrition” for a full macro breakdown

Scale Tips

- The scale sleeps after 3 minutes of inactivity — wake it before connecting
- All five weight units are supported: oz, g, ml, fl oz, lbs
- If the scale disconnects mid-session, place an item on it to wake it and reconnect
- Confirm your model is ENS-L221S-SUS — not the older EKS-L221-SUS

18. Wild & Home Harvest

Smart Kitchen has dedicated support for hunters, anglers, and home gardeners — building meals around what you bring home from the field, the water, and the garden.

Wild Harvest

- Tap “Inventory” → “+ Add Item”
- Set Category to “Wild Harvest”
- Set the Category to “Wild Harvest” and choose the species type from the dropdown (Deer, Elk, Turkey, Bass, Walleye, Trout, Salmon, Panfish, and more)
- Enter quantity and storage location (Freezer, Refrigerator, etc.)

Home Harvest

- Set Category to “Home Harvest” when adding inventory items
- Add items and set Category to “Home Harvest” — choose from vegetables, eggs, preserved goods, and other garden produce
- Home Harvest items are prioritized in meal plan generation to help use fresh garden produce first
- Use the 🦌 Wild Harvest and 🌱 Home Harvest filter chips in the Inventory tab to quickly view only your harvest items

Freezer Labels

- Tap the green “🖨️ Print Labels” button in the Inventory tab filter bar
- Choose Avery label format (5160, 5163, or 5164)
- Select which inventory items to label
- Tap “Print Labels” — a print-ready label sheet opens

19. Voice Assistant — Hey Cathy

Hey Cathy is Smart Kitchen's built-in voice assistant. Hold the microphone button, speak your command, and Cathy responds both in text and aloud.

How to Use

- Tap the  Hey Cathy button in the menu bar
- Hold the button while speaking your command
- Release to send
- Cathy responds in the chat panel and speaks the response aloud

Voice Commands

Say Something Like	What Cathy Does
"What's for dinner tonight?"	Reads tonight's meal from the plan
"How much chicken do I have?"	Looks up chicken in your inventory

"Add 3 portions of salmon"	Adds the item to inventory directly
"Generate my meal plan"	Triggers a new 7-day plan
"What's on my shopping list?"	Reads your current shopping list
"What can I make with ground beef?"	Generates recipe suggestions

💡 Voice assistant requires Chrome on Android or desktop. Not supported in Safari or Firefox. Allow microphone access when your browser asks.

20. Occasion Planner

The Occasion Planner generates a complete meal tailored to a specific event — with the right recipes, portion sizes, and presentation style for the occasion.

The 4 Steps

Step	What You Choose
1	Event type: Dinner Party, Date Night, Kids Party, Quick Weeknight, or Holiday Meal
2	Guest count and any dietary restrictions for the occasion
3	Meal preferences or theme (optional — or let the AI decide)
4	Generate — the AI creates an occasion-appropriate meal plan

💡 Date Night automatically sets guest count to 2 and enables wine pairing suggestions.

21. Household Members & Sharing

Invite family members or caregivers to access your Smart Kitchen account with appropriate permissions.

Member Roles

Role	What They Can Do
Owner	Full access. Creates the account and manages billing.
Viewer	Read-only. Can see the meal plan, inventory, and recipes but cannot make changes.
Manager	Can edit meals and inventory. Cannot access billing.
Guest Viewer	Accesses via a memorable household code. No account required.

Inviting Someone

65. Tap the ⚙ Settings gear icon → Household Members
66. Tap “+ Invite Someone”
67. Enter their email address and choose a role
68. Tap Send Invite — they receive an email with a link to join

Household Code (Guest Viewer)

- Find your household code in Settings → Household Members
- Share this code with a family member or caregiver
- They go to smart-kitchen-opal.vercel.app, tap “Have a family code?” and enter the code
- They see your kitchen in read-only mode — no account needed

[SCREENSHOT 39]

Household Members settings — showing the household code, active members list, and Invite Someone button

22. Settings, Senior Mode & Dark Mode

Senior Mode

- Tap the “Aa” button in the top bar to toggle Senior Mode on or off
- Increases text size to 18px+, enlarges buttons to 28×28px, simplifies navigation
- The setting saves automatically and persists across all your devices

Dark Mode / Light Mode

- Tap the moon 🌙 or sun ☀ icon in the top bar to switch between dark and light themes
- Dark mode is recommended for evening use and reduces screen glare
- Your theme preference saves automatically

Other Settings

- Voice assistant name and voice style

- Recipe website preference for recipe card web links (Google Recipes, AllRecipes, Pinterest, Food Network)
- Shopping partner name and email for sharing your list
- Cloud sync — manual Save to Cloud or Load from Cloud

23. Subscription & Account

Pricing Tiers

Tier	Price / Best For
Solo	\$7.99/mo or \$49.99/yr — Single-person household, all core features
Couple	\$9.99/mo — Two-person household
Family	\$14.99/mo or \$99.99/yr — Up to 6 family members, per-member dietary profiles
Medical+	+\$10/mo flat add-on — All engines, 20+ conditions, Smart Plate, Dashboard, Journal, WW Points, Email Report

Annual billing saves the equivalent of 2 months. 30-day free trial — no credit card required. Promotional pricing may be available at select events.

Managing Your Subscription

- Go to Settings → Account to view your plan, trial status, and billing
- Upgrade, downgrade, or cancel at any time

Signing Out

- Tap “Sign Out” in the top-right corner
- Sign back in at any time on any device to restore your full account

24. Troubleshooting

Meal plan not generating

- Check your internet connection — AI generation requires an active connection
- Make sure at least one family profile is set up
- Try refreshing the page or signing out and back in

Confirmation email not arriving

- Check your spam or junk folder
- Wait 2–3 minutes — delivery can occasionally be delayed
- Tap “Back to sign in” on the confirmation screen and try again

Bluetooth scale not connecting

- Use Google Chrome on Android or desktop — Bluetooth does not work in Safari or Firefox
- Wake the scale before connecting — place an item on it or press the power button
- The scale sleeps after 3 minutes — wake it if it has been idle
- Confirm the model is ENS-L221S-SUS (not the older EKS-L221-SUS)

Recipe Explore returning no results

- Check your internet connection
- Try a shorter, simpler query (e.g. “chicken” instead of “Italian lemon chicken piccata”)
- Both Use What I Have and Open Exploration require an active connection

Nutrition estimate returning an error

- Make sure both food name and amount fields are filled before tapping Estimate Nutrition
- Use a specific food name (e.g. “chicken breast” not just “chicken”)
- Check your internet connection

Email report not arriving

- Confirm the email address in the confirmation modal is correct
- Check your spam folder — reports arrive from noreply@rinehartra.com
- Allow up to 5 minutes for delivery

Voice assistant not responding

- Voice input requires Chrome on Android or desktop

- Allow microphone access when your browser asks for permission
- Check that your device volume is turned up

Data not syncing across devices

- Make sure you are signed in with the same email and password on both devices
- Wait 30–60 seconds after making changes — sync is automatic
- Sign out and sign back in to trigger a fresh cloud load

Contact Support

Tap the chat bubble in the bottom corner of the app to reach your kitchen assistant. For direct support, email thesmartkitchenapp@gmail.com.

25. Screenshot Reference Index

The following screenshots are needed to complete this guide. Open the app in an incognito window at smart-kitchen-opal.vercel.app to capture each one with no cached data.

#	Screenshot	Where to Find It
1A–1I	Setup wizard screenshots	Welcome screen through setup completion
10	Receipt scanner result	After scanning a receipt and reviewing identified items
11	Weekly Ad scanner	Tap Scan → Weekly Ad tab
12	Leftover scanner	Tap Scan → Leftover tab
13	Family profiles screen	Tap the Family button in the menu bar
14	Add or edit member form	Tap + Add Member inside the Family screen
15	Guided Plate Mode toggle	Open any member profile and scroll down
16	7-Day Dinner Plan	Tap the MEAL PLAN tab after generating a plan
17	Meal plan day card	Tap any day card to expand the full recipe and buttons
18	Recipes tab	Tap the RECIPES tab
19	Explore modal	Tap the Explore button in the Recipes tab top bar
20	Explore results	After tapping Explore with a query
