

Smart Kitchen™

Family Guide

Your Household Guide to AI-Powered Meal Planning

Version 10.0 • May 2026 • smart-kitchen-opal.vercel.app

How This App Started

This app started with a question I dreaded hearing.

Sue has been dealing with some things for a while now. Working from home sounds like it should make something like this easier. And in some ways, sure. But it also means there's no commute to decompress — the laptop closes and you're already standing in the kitchen. By that point in the day I've already made more decisions than I can count.

Sue would ask 'What's for dinner?' and I would get irritated. Not at Sue — never at Sue. Just at the question itself. One more decision at the end of a day that already had too many.

THE IDEA

What if the app just knew what was for dinner? What if it looked at what was in the kitchen, knew who it was cooking for, knew which nights were slammed — and just handled it?

That's Smart Kitchen™. You two families are the first people I trusted with this. Your feedback — what works, what doesn't, what you wish it did — is what shapes everything that gets built next.

— Rick

What's New in Version 10.0

Feature	What It Does
 Medical+ Module	Per-member medication tracking, allergy profiles, food-drug interaction detection, and enforcement levels. Set once — enforced in every meal plan, recipe card, and recipe modal.
 Can I Have This?	Tap the red button in the top nav. Type a food or photograph a product label. The AI checks every family member's full medical and dietary profile and returns a per-person verdict with specific reasons.
Medication Autocomplete	Type 2 letters in the medication name field and a dropdown appears with 200+ drug matches. Tap to fill. Works great on mobile.
Warn Badges on Meal Cards	Amber  badges appear on meal plan cards and inside recipe modals when a food-drug interaction is detected. Shows the member name and specific reason (e.g. 'Sue — High vitamin K — may affect Warfarin').
Strict Enforcement	When a member's enforcement level is set to Strict, the AI receives a hard stop instruction and will not suggest meals containing conflicting ingredients.
Viewer Code System	Share a 4-12 character code with a family member or caregiver. They can see your meal plan, inventory, and shopping list in read-only mode — no account changes possible.
Cloud Sync Improvements	Medical+ data (medications, supplements, allergies, enforcement levels) is now preserved when loading data across devices. No more re-entering after login.

Medical+ Module — How It Works for Your Family

The Medical+ Module is built for households like Sue's — where medications, food allergies, and dietary restrictions all need to be tracked together. It is live and operational.

Setting Up Sue's Profile

Go to the Family tab. Tap Edit next to Sue. Scroll down to the MEDICAL+ PROFILE section (red left border).

What to Enter	How
Dietary Plan	Tap Diabetic-Friendly, Cardiac, Low Sodium, or any other plan that fits. Tap Custom to write your own description.
Allergies	Tap the standard allergen buttons (Peanuts, Dairy, Shellfish, etc.). Add others in the free-text field below.
Medications	Tap + Add Medication. Start typing the drug name — the autocomplete dropdown shows matches. Add Dose and Schedule (e.g. '1 as needed', '2 daily', '1 nightly').
Supplements	Tap + Add Supplement. Enter name, dose, and schedule.
Enforcement Level	Choose Strict (AI never suggests conflicting meals), Warn (badge appears on meal card with reason), or Inform (educational note only). You control this — nothing happens automatically without your choice.

IMPORTANT

Enforcement levels are always set by you. Nothing is filtered or blocked without your explicit choice. You are in complete control of how the AI responds to each family member's profile.

Can I Have This? — Live Label Scanning

The  Can I Have This? button is in the top navigation bar next to Family Recipes. It is available whenever a family member has restrictions or a Medical+ profile active.

- Type a food — type 'grapefruit' or 'spinach salad' and press Enter. Results in seconds.
- Scan a label — tap the photo zone. Camera opens directly on your phone. Photograph any product. Get a per-member verdict.
- Results show: overall verdict (Safe / Use Caution / Not Recommended) plus each family member's individual result and the specific reason for any flag.

REAL EXAMPLE

Bush's Honey Sweet Baked Beans photographed in real time. Result: Use Caution — Sue — vitamin K in beans may interact with Warfarin. Rick and Matt: Safe. Exactly what a caregiver needs standing in the grocery store aisle.

What Smart Kitchen Does — Full Feature List

Feature	What It Does
7-Day Meal Plan	One tap builds a full week of dinners around your inventory, family size, dietary needs, and what you've liked before.
Adaptive Learning	The AI learns what your family cooks, loves, and skips. After a few weeks it starts predicting what you want before you ask.
Wild Harvest	Andrew's venison, salmon, and panfish logged as inventory. The AI builds meals around what he brings home.

Feature	What It Does
Home Harvest	Garden produce, backyard eggs, preserved goods — tracked with shelf life and surfaced before anything spoils.
Harvest Label Printing	Print Avery label sheets for freezer bags and canning jars. Item name, harvest date, best-by date, Smart Kitchen branding.
Leftover Scanner	Photograph a leftover container. App identifies the dish, estimates servings, sets a use-by date. Tap Used (Dinner or Lunch) or Remove.
Busy Night Flag	Mark a hectic evening — the app swaps in a quick meal under 20 minutes. Leftovers are used first before they expire.
Star Ratings	Rate any meal 1-5 stars. 1 star bans it from suggestions. 5 stars makes it a Keeper. Rejected Meals view lets you undo any rating.
Change Meal	Swap any day's dinner. Rejected meals are logged — skipped twice means it joins the Never Suggest list automatically.
Shopping List Email	Set up a shopping partner in Settings — yourself, a partner, or a professional shopping service like Shipt. One tap emails the full categorized list.
Support Chat	Built-in AI support — tap the bubble in the bottom right. Knows your family profile and inventory.
Viewer Code	Share a code with a caregiver or family member for read-only access to the full app.

Kyle's Diabetic Profile — How It Works

AUTOMATIC COMPLIANCE	<i>Kyle's diabetic-friendly profile means the AI uses brown rice instead of white rice, whole wheat pasta instead of regular, lower glycemic ingredients throughout, and reduced sodium — on every meal, every plan, without anyone asking. Set once. Enforced everywhere.</i>
-----------------------------	--

This is the core Medical+ feature. It's not a filter — it's built into the AI prompt so the substitutions happen before a suggestion is ever offered.

How the App Learns Your Family

What you do	What it teaches the AI
Tap Made It on a meal	Logs that your family cooked it. Do it 2+ times and it becomes a household favorite.
Give a meal 5 stars	Saves it as a Keeper. The AI will suggest it again regularly.
Give a meal 1 star	Bans it from future suggestions. Check Saved tab to Restore if it was a mistake.
Tap Change Meal	Logs the rejection. Skip the same meal twice and it stops being offered.
Log a leftover as Used — Dinner	Confirms the leftover was eaten at dinner. Validates the portion size was right.
Log a leftover as Used — Lunch	Separate signal — the app learns this dish works well as next-day lunch.
Correct the bag count in Repackage	The yield difference is logged. Over time the estimates improve for your produce.

Quick Reference

Question	Answer
App URL	smart-kitchen-opal.vercel.app
How do I open Can I Have This?	Tap the red  Can I Have This? button in the top nav bar, next to Family Recipes.
How do I add a medication?	Family tab → Edit → MEDICAL+ PROFILE → + Add Medication → type name (autocomplete) → Dose → Schedule
How do I set enforcement level?	Family tab → Edit → MEDICAL+ PROFILE → AI Enforcement Level → Strict / Warn / Inform
How do I add a Wild Harvest item?	Inventory → + Add → Category: Wild Harvest → Location: Freezer or Fridge
How do I print freezer labels?	Inventory → green Print Labels button → select format → select items → Print Labels
How do I restore a rejected meal?	Saved tab → scroll to Rejected Meals → tap Restore
How do I scan a leftover?	Leftovers tab → Scan Leftover Container → photograph container → Identify & Save
How do I give someone read-only access?	Settings → Viewer Code → set a code → share it with the viewer
How do I scan a food label?	Tap  Can I Have This? → tap the photo zone → point camera at label → tap Check This Food
