Free Trial	30 days, no credit card	—	All
SMG528 Promo	\$5/month off first 12 months	Enter at Stripe checkout	—

★ NEW: Family Recipes

Family Recipes is a personal recipe box built into Smart Kitchen. Access it via the Family Recipes button in the main navigation bar, next to Make This.

★ NEW Three Ways to Add a Recipe

Type it in: Enter the recipe name, ingredients, steps, and servings manually in the edit form.

Photo scan: Take a photo (or choose from gallery) of a handwritten or printed recipe. Tap Add Another Photo to capture multiple pages. Tap Read Recipe — Claude reads all photos and assembles one complete recipe card. Review and edit before saving.

Recipe idea: Describe an idea loosely ("Grandma's chicken casserole with cream of mushroom") and Claude creates a full recipe card with proper ingredients, steps, and servings. Review and edit before saving.

★ NEW Recipe Card Features

Homey design: Cream/warm white background, Georgia serif font, "From the kitchen of..." personal line, gold and brown warm tones.

Servings scaling: Tap + or – on the Serves badge. All ingredient amounts scale automatically in real time.

Dish photo: Tap "Add a photo of this dish" to photograph the finished meal. Camera or gallery. Compressed and saved to the card. Shows "Change Photo" after a photo exists.

Print Recipe: Opens a styled recipe card in a new window formatted for print or PDF. Works on mobile (iframe blob) and desktop (popup window). Includes dish photo if one exists.

Shopping list push: "Add Missing to Shopping List" checks your inventory and adds only what you actually need.

★ NEW Meal Plan Rotation

Toggle "Include in meal plan rotation" on any family recipe. Choose frequency:

Weekly: Eligible every week.

Monthly: Eligible every 4 weeks.

Seasonal: Eligible only during selected seasons and holidays: Spring, Summer, Fall, Winter, Christmas, Thanksgiving, Easter, Fourth of July.

When generating a weekly meal plan, Claude checks which family recipes are eligible based on the current season and rotation setting, and suggests 1-2 if the ingredients are on hand.

★ UPDATED: Setup Wizard

The setup wizard runs on first login. The correct step sequence is:

Step 1 — Create Account: Email address, password (min 6 characters), first name. Supabase account created immediately. Confirmation email sent via Resend from Smart Kitchen / noreply@rinehartra.com. "Skip for now" option available.

Step 2 — Welcome Screen: Logo, app overview, feature highlights.

Step 3 — Here's What We'll Set Up: Overview of the 3 wizard steps.

Step 4 — Family Profile: Family size, member names, dietary restrictions per member.

Step 5 — Recipe Search: Choose preferred recipe site: Google Recipes, AllRecipes, Pinterest, Food Network.

Step 6 — Proteins: Add protein portions to inventory. Skip option available.

Step 7 — Inventory Setup: Start with common pantry items (pre-checked), start from scratch, or skip for now.

Step 8 — Pantry Checklist: Check off items you have. Tap Finish Setup to add them to inventory.

★ UPDATED: Senior Mode

Tap the Aa✓ button in the top navigation bar to toggle Senior Mode. The checkmark indicates it is active.

Senior Mode now scales ALL text throughout the app including:

Welcome modal: Title, tagline, feature descriptions, Get Started button.

Setup wizard: All step titles, descriptions, and buttons.

Chat panel: Message bubbles, typing indicator, input field, Send button.

Recipe cards: All card types including Family Recipes.

Light Mode and Dark Mode are also available — toggle with the moon/sun icon next to Aa.

★ **NEW: Print Recipe (All Card Types)**

A Print button now appears on every recipe card in the app. Tapping it opens a formatted recipe card optimized for print or PDF export.

Print is available on: Meal Plan cards (tap recipe name), Recipes tab cards, Desserts tab cards, Saved Recipes cards, Make This result, and Family Recipe cards.

The printed card includes: recipe name, time and difficulty, dish photo (if one exists), ingredients, numbered instructions, and Smart Kitchen™ branding footer.

On mobile: uses iframe blob method for compatibility with HP AirPrint and other mobile print systems. On desktop: opens a new popup window.

★ **NEW: Auth Emails via Resend**

Supabase authentication emails (account confirmation, password reset, magic link) now route through Resend via custom SMTP.

Sender: Smart Kitchen / noreply@rinehartra.com

No rate limits: Resend handles unlimited send volume. No Supabase shared-server throttling.

Domain: rinehartra.com is verified in Resend. rgdigitallabs.com can be added as a future sender domain.

Version History

Version	Changes
v8.0 — May 2026	Family Recipes (type/photo scan multi-page/AI idea, homey card, servings scaling, dish photo, print, rotation, seasonal). Print Recipe on all card types (mobile + desktop).
